Course Overview

A one-day, hands-on course in which learners use Codex, the agentic coding surface in the ChatGPT desktop app, to take one business — Cook & Bake Academy Singapore, a cooking and baking school — from a written brief to a live, assisted and governed website. Codex plans and builds the site and a sign-up form for every course, publishes it, turns the brochures into a SQLite knowledge base behind a RAG course assistant, red-teams and QA-tests it with Computer Use, then adds community and custom skills, a workshop popup and a hook that checks every edit. Every lab starts from what the previous lab produced.

Course code C989 · 1 day · 7.5 instructional hours (9:30am – 5:30pm) · 106-slide deck v1.0 · 10 labs (Labs 1–10), each in its own folder.

Learning Outcomes

By the end of this course, participants will be able to:

- **LO1.** Analyse agentic AI applications — ChatGPT, ChatGPT Work and Codex — and their strengths, limitations and suitability for a business problem.
- **LO2.** Correlate the design of an agent's instructions, tools and retrieval with the efficiency and quality of the result.
- **LO3.** Assess the effectiveness, safety and reliability of agent-built work using golden-question evaluation, hooks, Computer Use testing and human review.
- **LO4.** Evaluate comparative effectiveness and recommend a governed way to run agentic AI applications in a real business, using observable evidence.

Daily Schedule

The day runs 9:30am – 5:30pm: 7.5 instructional hours with a single 30-minute lunch. The Slides column gives the deck pages for each teaching block.

Day 1 — Build, Assist and Govern · 9:30am – 5:30pm

Time	Duration	Topic / Activity	Method	Slides
9:30 AM–9:50 AM	20 min	Welcome, trainer, ground rules, the Cook & Bake scenario, the right surface for each job, course outline, lab materials and schedule	Presentation , discussion	1–10
9:50 AM–10:15 AM	25 min	Topic 1 — evolution of AI engineering, harness engineering and the agent loop, Chat, Work and Codex, GPT-6 models, desktop app, plugins, Work research, @Sites	Presentation , live demo	11–21
10:15 AM–10:25 AM	10 min	Codex: projects, folders and permissions, the 7-step workflow, /plan	Presentation , live demo	22–25
10:25 AM–11:05	40 min	Lab 1 — Plan and build the site with	Hands-on	26–29

AM		/plan	lab	
11:05 AM–11:10 AM	5 min	Context engineering with AGENTS.md; a sign-up form with no backend	Presentation	30–32
11:10 AM–11:40 AM	30 min	Lab 2 — Project rules and a sign-up form for every course	Hands-on lab	33–36
11:40 AM–11:45 AM	5 min	Publishing: GitHub Pages or Sites	Presentation	37
11:45 AM–12:10 PM	25 min	Lab 3 — Publish the site: GitHub Pages and Sites	Hands-on lab	38–42
12:10 PM–12:15 PM	5 min	Topic 1 recap	Discussion	43
12:15 PM–12:45 PM	30 min	Lunch	—	—
12:45 PM–1:00 PM	15 min	Topic 2 — slash commands, /goal, RAG, SQLite in the browser, architecture	Presentation , live demo	44–50
1:00 PM–1:25 PM	25 min	Lab 4 — Turn the brochures into a SQLite knowledge base	Hands-on lab	51–54
1:25 PM–1:30 PM	5 min	Measuring before trusting: the golden-question set	Presentation	55
1:30 PM–2:05 PM	35 min	Lab 5 — Build the course assistant and drive it with /goal	Hands-on lab	56–60
2:05 PM–2:10 PM	5 min	Search mode vs ChatGPT mode; keys and static sites	Presentation	61–63
2:10 PM–2:35 PM	25 min	Lab 6 — Add ChatGPT mode, then try to break it	Hands-on lab	64–67
2:35 PM–2:40 PM	5 min	The Computer Use tool	Presentation	68
2:40 PM–3:05 PM	25 min	Lab 7 — QA the whole site with @Computer Use	Hands-on lab	69–72
3:05 PM–3:10 PM	5 min	Topic 2 recap	Discussion	73
3:10 PM–3:20 PM	10 min	Topic 3 — agent skills, where skills live, SKILL.md vs AGENTS.md, skills.sh	Presentation , live demo	74–79
3:20 PM–3:45 PM	25 min	Lab 8 — Install community skills from skills.sh	Hands-on lab	80–85
3:45 PM–3:50 PM	5 min	Creating your own skill; anatomy of kb-update	Presentation	86–87
3:50 PM–4:15 PM	25 min	Lab 9 — Create custom Codex skills	Hands-on lab	88–93

4:15 PM–4:25 PM	10 min	Hooks: triggered by events — timer vs hook vs schedule	Presentation	94–97
4:25 PM–5:00 PM	35 min	Lab 10 — A workshop popup and a hook that checks every edit	Hands-on lab	98–102
5:00 PM–5:30 PM	30 min	Course summary: how each feature is triggered, wrap-up, Q&A and course feedback	Discussion	103–105

Topic-by-topic Breakdown

Topic 1 — Fundamentals: Chat, Work and Codex • Slides 11–43

- How AI engineering got here, and why the harness matters
- OpenAI's products, the GPT-6 models and the desktop app
- Projects, permissions, /plan and the 7-step workflow
- Build the site with Codex, add sign-ups, publish it

Lab 1 — Plan and Build the Site with /plan • Slides 26–29

- **Surface:** Codex
- **Time:** 40 minutes
- **Features practised:** Add a folder · GPT-6 Sol · /plan · the 7-step workflow
- **Output:** A running site: hero with photos, 20 course cards, filters, search, campuses
- **Evidence:** Plan mode showed numbered steps AND questions before any edit. No horizontal scroll at 375px wide.
- **Lab folder:** labs/lab-01-plan-and-build-the-site/

Lab 2 — Project Rules and a Sign-up Form for Every Course • Slides 33–36

- **Surface:** Codex
- **Time:** 30 minutes
- **Features practised:** /init · AGENTS.md · static-site forms · consent
- **Output:** AGENTS.md, a validated sign-up form on every card, and a staff CSV export
- **Evidence:** AGENTS.md has the four sections and is under 60 lines. admin.html exports a CSV with the 12 columns in the spec.
- **Lab folder:** labs/lab-02-rules-and-signup-forms/

Lab 3 — Publish the Site: GitHub Pages and Sites • Slides 38–42

- **Surface:** Codex → GitHub Pages → @Sites
- **Time:** 25 minutes
- **Features practised:** git · GitHub Pages (deploy from a branch) · @Sites access control
- **Output:** A public GitHub Pages site for customers and a private Sites copy for investors
- **Evidence:** Codex listed the files and none is a secret or an export. You can say which URL is for customers and which for investors.

- **Lab folder:** labs/lab-03-publish-the-site/

Topic 2 — Tools and the SQLite RAG Assistant • Slides 44–73

- Codex commands, /goal and tools
- RAG: answering from your own documents
- A SQLite knowledge base that runs in the browser
- ChatGPT mode, red-teaming and Computer Use QA

Lab 4 — Turn the Brochures into a SQLite Knowledge Base • Slides 51–54

- **Surface:** Codex
- **Time:** 25 minutes
- **Features practised:** SQLite FTS5 · official SQLite WASM · nested AGENTS.md
- **Output:** data/academy.db — 140 searchable chunks and a courses table
- **Evidence:** data/academy.db exists (about 150 KB). Running the build twice gives the same counts.
- **Lab folder:** labs/lab-04-sqlite-knowledge-base/

Lab 5 — Build the Course Assistant and Drive It with /goal • Slides 56–60

- **Surface:** Codex
- **Time:** 35 minutes
- **Features practised:** In-browser RAG · golden-question evaluation · /goal
- **Output:** A working course assistant that passes 30/30 golden questions
- **Evidence:** The assistant runs in the browser with no server code. "What is the cheapest course?" answers CUL-210, S\$160.
- **Lab folder:** labs/lab-05-course-assistant-and-goal/

Lab 6 — Add ChatGPT Mode, Then Try to Break It • Slides 64–67

- **Surface:** Codex
- **Time:** 25 minutes
- **Features practised:** OpenAI Responses API · gpt-6-luna · grounded prompt · prompt injection
- **Output:** A two-mode assistant that stays grounded under attack
- **Evidence:** git grep "sk-" finds no key anywhere in the repo. A bad key falls back to search mode with a message.
- **Lab folder:** labs/lab-06-chatgpt-mode-and-red-team/

Lab 7 — QA the Whole Site with @Computer Use • Slides 69–72

- **Surface:** Codex + Computer Use
- **Time:** 25 minutes
- **Features practised:** @Computer Use · evidence-based QA
- **Output:** A ranked defect table with screenshots, and one verified fix
- **Evidence:** Computer Use drove a real browser through the whole script. The top defect is fixed and the retest confirms it.
- **Lab folder:** labs/lab-07-qa-with-computer-use/

Topic 3 — Skills and Hooks • Slides 74–102

- Skills: packaged expertise, from skills.sh or your own
- Custom Codex skills with \$skill-creator
- A workshop popup that turns visitors into sign-ups
- A hook that re-checks the site after every edit

Lab 8 — Install Community Skills from skills.sh • Slides 80–85

- **Surface:** Codex
- **Time: 25 minutes**
- **Features practised:** npx skills add · frontend-design · cybersecurity-analyst · anthropic-cybersecurity-skills
- **Output:** A polished UI, a ranked security review, and the skills lock file
- **Evidence:** Three skills are in .agents/skills/ and in the lock file. You fixed the top finding (e.g. a Content-Security-Policy).
- **Lab folder:** labs/lab-08-skills-from-skills-sh/

Lab 9 — Create Custom Codex Skills • Slides 88–93

- **Surface:** Codex
- **Time: 25 minutes**
- **Features practised:** \$skill-installer · \$skill-creator · implicit triggering
- **Output:** \$kb-update and \$course-brochure skills, and a new course live
- **Evidence:** project-setup is installed and listed, but was not run. \$kb-update fired on its own in a new chat.
- **Lab folder:** labs/lab-09-custom-codex-skills/

Lab 10 — A Workshop Popup and a Hook That Checks Every Edit • Slides 98–102

- **Surface:** Codex
- **Time: 35 minutes**
- **Features practised:** timed popup · 3-field form · hook on an event · trust
- **Output:** A 10-second workshop invite with a name, mobile and email form, and a trusted hook that runs npm run check after every edit
- **Evidence:** The invite opens after about 10 seconds, not before. npm run check passes every golden question, and the live site shows the invite.
- **Lab folder:** labs/lab-10-workshop-popup-and-a-hook/

Resources Required

- Trainer: the v1.0 slide deck, this Lesson Plan, the Learner Guide, the lab pack (labs/, 10 folders: Labs 1–10) and the reference app.
- Each learner: a laptop with the ChatGPT desktop app on a paid plan that includes Codex and Sites; Node.js 22; Python 3; Git; and a GitHub account.
- A spend-limited OpenAI API key issued by the trainer for Lab 6, revoked after class.
- Internet access to chatgpt.com, api.openai.com, github.com, skills.sh, npmjs.com and images.unsplash.com.

- All fixtures are synthetic. Every learner email address resolves to the learner's own Gmail via plus-addressing.
