

Labs — Codex Masterclass

C989 · 10 labs (Labs 1–10) · one startup, from a written brief to a live, assisted and governed website.

The scenario

Grace Lim spent twelve years as a hotel pastry chef. In August 2026 she signed leases on two small teaching kitchens — the Orchard Road Bakehouse for baking and the Bukit Timah Culinary Campus for cooking — and drafted 20 hands-on courses from S\$160 to S\$1,580. She has six months of savings, one part-time administrator, seven freelance chefs, and a first term that starts on Saturday 10 October 2026.

She cannot afford an agency, a developer and a marketing team. She has the ChatGPT desktop app with Codex. You are her AI-assisted team for the day:

Build — the website and a sign-up form for every course, published (Codex) Assist — a SQLite knowledge base and a RAG course assistant (Codex) Check — golden questions, a red team and Computer Use QA (Codex) Govern — skills, a workshop popup and a hook on every edit (Codex)

Every lab starts from what the previous lab produced. The data is fictitious but internally consistent, and every learner email address in it resolves to your own inbox.

The labs

#	Lab	Topic	Surface	Time
01	Plan and Build the Site with /plan	1	Codex	40 min
02	Project Rules and a Sign-up Form for Every Course	1	Codex	30 min
03	Publish the Site: GitHub Pages and Sites	1	Codex → GitHub Pages → @Sites	25 min
04	Turn the Brochures into a SQLite Knowledge Base	2	Codex	25 min
05	Build the Course Assistant and Drive It with /goal	2	Codex	35 min
06	Add ChatGPT Mode, Then Try to Break It	2	Codex	25 min
07	QA the Whole Site with @Computer Use	2	Codex + Computer Use	25 min
08	Install Community Skills from skills.sh	3	Codex	25 min
09	Create Custom Codex Skills	3	Codex	25 min
10	A Workshop Popup and a Hook That Checks Every Edit	3	Codex	35 min

Before you start

- ChatGPT desktop app on a plan with Codex and Sites.
- Node.js 22, Python 3, Git and a GitHub account.
- One working folder, `cook-and-bake`, for Labs 1–10.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password or personal data into a prompt or a file. Every email address in the data must resolve to your own inbox. Nothing is published or sent without your explicit approval.
