

Lab 02 — Project Rules and a Sign-up Form for Every Course

Course: Codex Masterclass (C989)

Topic 1 · about 30 minutes · slides 33–36

Surface: Codex

Features: /init · AGENTS.md · static-site forms · consent

The story so far

Investors liked the site and asked the obvious question: how does anyone book? There is no budget for a booking system yet. Grace needs a sign-up form on every course that works on a static site — and rules so every future change follows the academy's standards.

Your goal

Give Codex durable rules, then let visitors sign up for any course — with no backend.

You'll build

AGENTS.md, a validated sign-up form on every card, and a staff CSV export

What is in this folder

- assets/AGENTS.template.md
- assets/signup-spec.md
- assets/signups-format.csv
- solution/ — reference files from the verified build
- prompts.md / prompts.pdf — every prompt, ready to paste
- evidence/checklist.md — what to capture as proof

Step by step

1. **Generate rules** — Run /init. Read what Codex wrote.
2. **Trim them** — Cut AGENTS.md to four sections — What this is, Commands, Conventions, Boundaries — under 60 lines.
3. **Add a boundary** — Add: "No framework. Never put an API key in code." Then ask Codex to add Bootstrap and watch it refuse.
4. **Build the form** — Paste the prompt. It follows signup-spec.md.
5. **Break it on purpose** — Submit a bad email, a 5-digit mobile and no consent. Then a nut allergy on the macaron course.
6. **Export** — Open admin.html and export the CSV.

The prompts

PROMPT — Codex

Add a sign-up form for every course, following signup-spec.md exactly.

- A Sign up button on every course card opens one shared , prefilled with that course.
- Fields: intake (from the course's intakes), full name, email, Singapore mobile, experience, allergies, a REQUIRED consent box and a SEPARATE, unticked newsletter opt-in.

- Validate in the browser with inline messages.
- If the allergy mentions nuts and the course uses nuts, show a warning (do not block).
- No backend: save to localStorage, show a reference number and a mailto link, and add admin.html that exports the CSV columns in signups-format.csv.

DONE WHEN every rule in signup-spec.md passes.

Check your work

- ☐ AGENTS.md has the four sections and is under 60 lines.
- ☐ Codex refused or questioned Bootstrap, citing your rule.
- ☐ Every one of the 20 cards has a working Sign up button.
- ☐ A bad email and a 5-digit mobile are rejected inline.
- ☐ Consent is required; the newsletter opt-in starts unticked.
- ☐ A nut allergy on BAK-104 shows a warning.
- ☐ admin.html exports a CSV with the 12 columns in the spec.

If it goes wrong

- **Consent and marketing merged** — They must be two boxes. Agreeing to be contacted about your sign-up is not agreeing to marketing.

Stretch

- Set SIGNUP_ENDPOINT to a Google Form or Formspree URL and confirm a submission arrives.

Why it matters: A static site cannot receive data. Say so honestly: localStorage and a CSV export for class; a form service in production.

Next

Lab 3 — Publish the Site: GitHub Pages and Sites. Keep what you built — the next lab starts from it.

Safety

Use only this lab's synthetic data and your own accounts. Never paste a real API key, password or personal data into a prompt or a file. Every email address in the data must resolve to your own inbox. Nothing is published or sent without your explicit approval.
