

Prompts — Lab 04: Publish the Site: GitHub Pages and Sites

Surface: Codex → GitHub Pages → @Sites. Paste each prompt as written; change only what the lab tells you to.

PROMPT A — Codex

```
Commit and push this project to GitHub.
```

```
Before committing, list every file you will add and  
confirm there is no .env file, API key or sign-up  
export among them. Write a commit message that says  
why, not what. Push to main, then give me the  
Pages URL (https://<your-user>.github.io/cook-and-bake/).
```

PROMPT B — @Sites

```
@Sites Deploy this project as a static site.  
It is plain HTML, CSS and JavaScript with no  
backend. Check compatibility, publish it, set access  
to Only those invited, and give me the URL.
```
